

TabitPad

Restaurant Operating System

All-in-one solution which replaces your existing Point-of-Sale systems and leverages mobile connectivity to streamline restaurant operations, extend sales opportunities, and elevate the overall experience for both operators and their customers.

Tableside Ordering and Payment

Tableside interaction with the customers eliminates the need for servers to write down orders (or attempt to memorize them) and then have to key them into the POS terminal. The app's intuitive workflow guides the server through the order taking process, ensuring that they capture all of the relevant details for each ordered item, while providing the best customer service.

Sales Increases

TabitPad allows the server to spend more time with their customers in the service area (tableside), promoting further sales opportunities (additional drinks, and desserts). The app-driven up-sell and cross-sell prompts provide servers with additional sales opportunities during the actual order taking process.

Decrease Table Turn Times

12-15 minute decrease in table turn time during peak times. Tableside interaction with your customers eliminates unproductive time spent on keying in orders and processing payments.

Streamlined Training

Train your employees in minutes, instead of hours. Intuitive workflows coupled with the extended product information available within the app, streamlines menu familiarity and training for new and existing staff.

Customer Loyalty

Boost customer loyalty and increase profits by targeting promotions to your most loyal customers.

Monitoring and Reporting

Get a consolidated view into the operations across multiple locations. Make smarter decisions, backed up by better data.
